

# Gender Asymmetries in Reality and Fiction: The Bechdel Test of Social Media

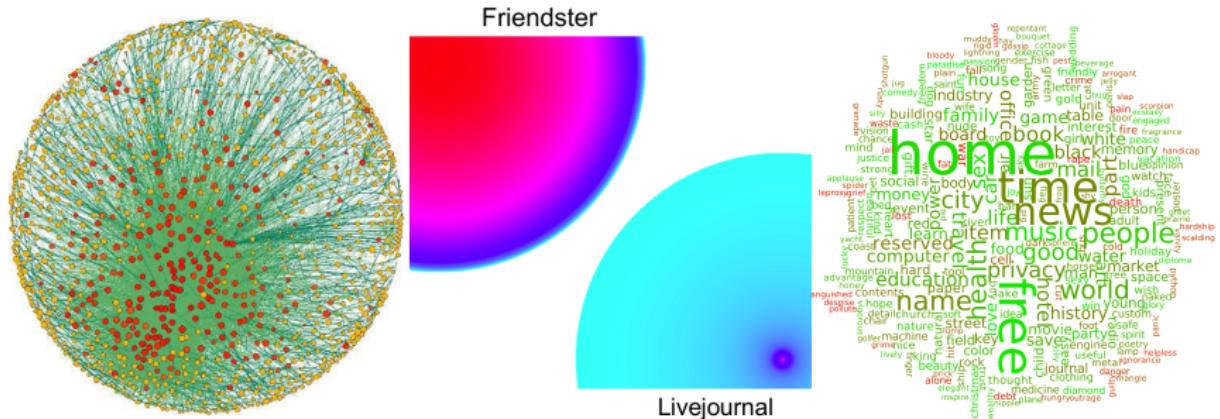

David García

Ingmar Weber, and Kiran Garimella

Chair of Systems Design at ETH Zurich

## ■ Main Research Areas

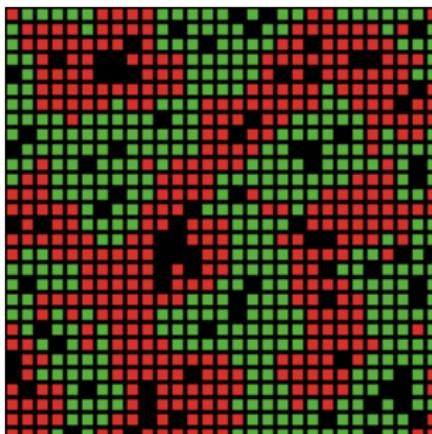

- **Adaptive Social Systems:** Online communities, animal societies...
  - **Economic Networks:** Ownership, R&D, financial networks, ...

## ■ Methodological approach: Data Driven Modeling

- **Digital traces:** Written interaction, online social networks
  - **Computational modeling:** Agent-based modeling, network dynamics

# Subconscious components of gender inequality

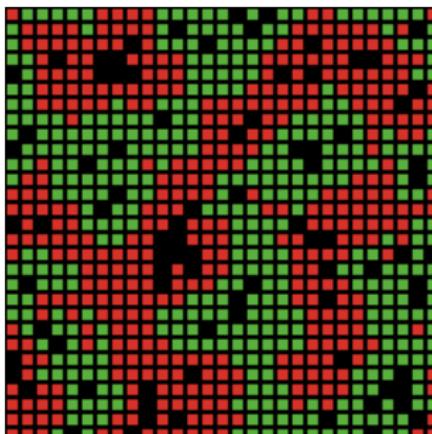

Macroscopic social phenomena can emerge from subtle, subconscious biases

- Example: Urban segregation

Culturomics

Quantitative understanding of culture through computational processing of text

# Subconscious components of gender inequality

Macroscopic social phenomena can emerge from subtle, subconscious biases

- Example: Urban segregation

Culturomics

Quantitative understanding of culture through computational processing of text

Two sources to measure gender bias:  
**movie scripts** and **online interaction**

- 1 Movie industry shows a male bias
- 2 Gender bias is absent in online interaction

# Social gender scripts

Behavioral script (Bower et al. 1979)

Patterned social arrangements that are both emergent from and determinant of the actions of the individuals.

**Objective:** Quantifying gender biases in behavioral scripts

- 1 Imagined scripts: Computational processing of movies
- 2 Real scripts: Online dialogues between individuals
- 3 And beyond: Movie impact, demographics of gender bias...

# Testing gender asymmetry

## The Bechdel Test for Movies

A movie passes the test if:

# Testing gender asymmetry

## The Bechdel Test for Movies

A movie passes the test if:

- 1 It has two female characters

# Testing gender asymmetry

## The Bechdel Test for Movies

A movie passes the test if:

- 1 It has two female characters
- 2 Who talk to each other

# Testing gender asymmetry

## The Bechdel Test for Movies

A movie passes the test if:

- 1 It has two female characters
- 2 Who talk to each other
- 3 About something besides a man

# Testing gender asymmetry

## The Bechdel Test for Movies

A movie passes the test if:

- 1 It has two female characters
- 2 Who talk to each other
- 3 About something besides a man

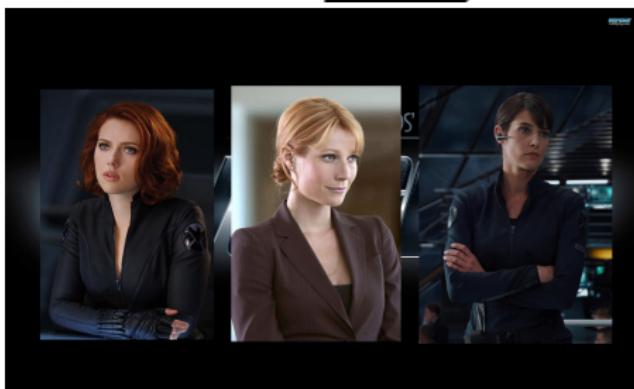

# Testing gender asymmetry

## The Bechdel Test for Movies

A movie passes the test if:

- 1 It has two female characters
- 2 Who talk to each other
- 3 About something besides a man

- 2 Who talk to each other
- 3 About something besides a man

# Computational analysis of movie scripts

# Computational Analysis of Movie Scripts

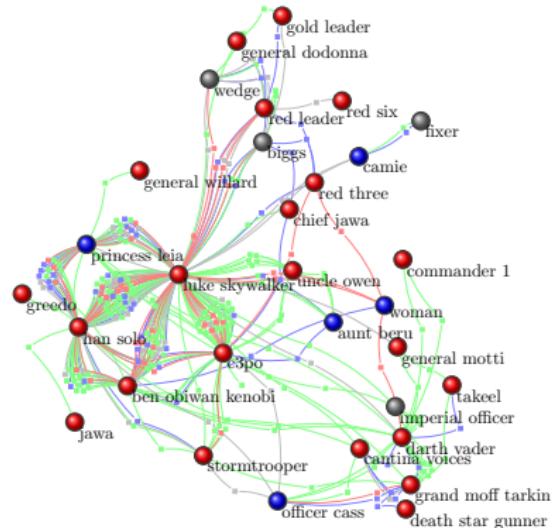

# Computational Analysis of Movie Scripts

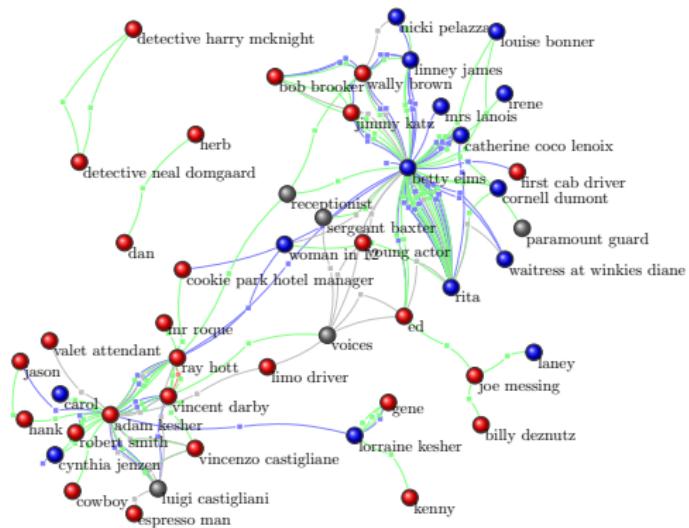

# Movie script network examples

## Star Wars: A new hope (1977)

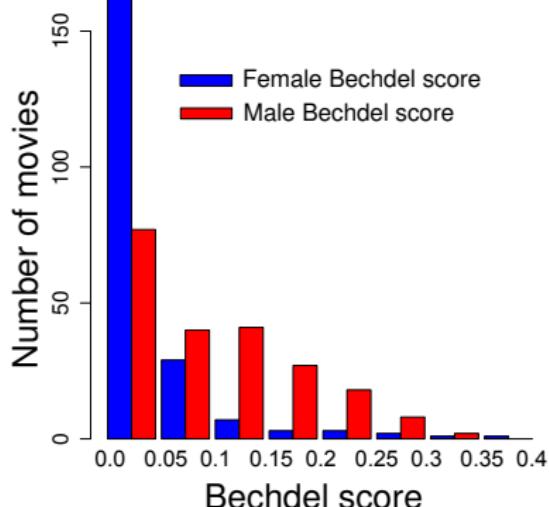

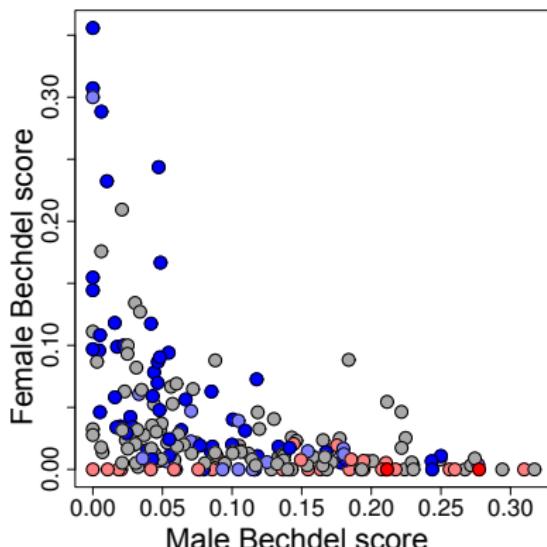

- Male Bechdel score: 16.3%
- Female Bechdel score: 0%

## Mulholland Drive (2001)

- Male Bechdel score: 4.9%
- Female Bechdel score: 16.6%

# The male bias of movies

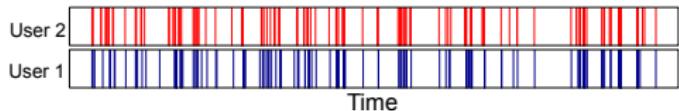

- The Bechdel score is consistent with *bechdeltest.com* ratings
- **Evidence for the existence of a male bias in movie industry**
- YouTube trailers of movies that do not pass have more views and likes
- Movies that pass are more likely to be shared in Twitter by women

# Gender in social media dialogues

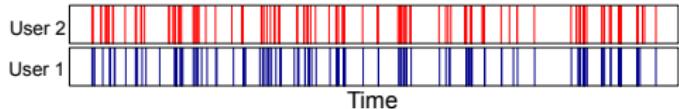

# Gender in social media dialogues

**Dialogue Processing**  
Twitter: 2.2M  
MySpace: 3K

# Gender in social media dialogues

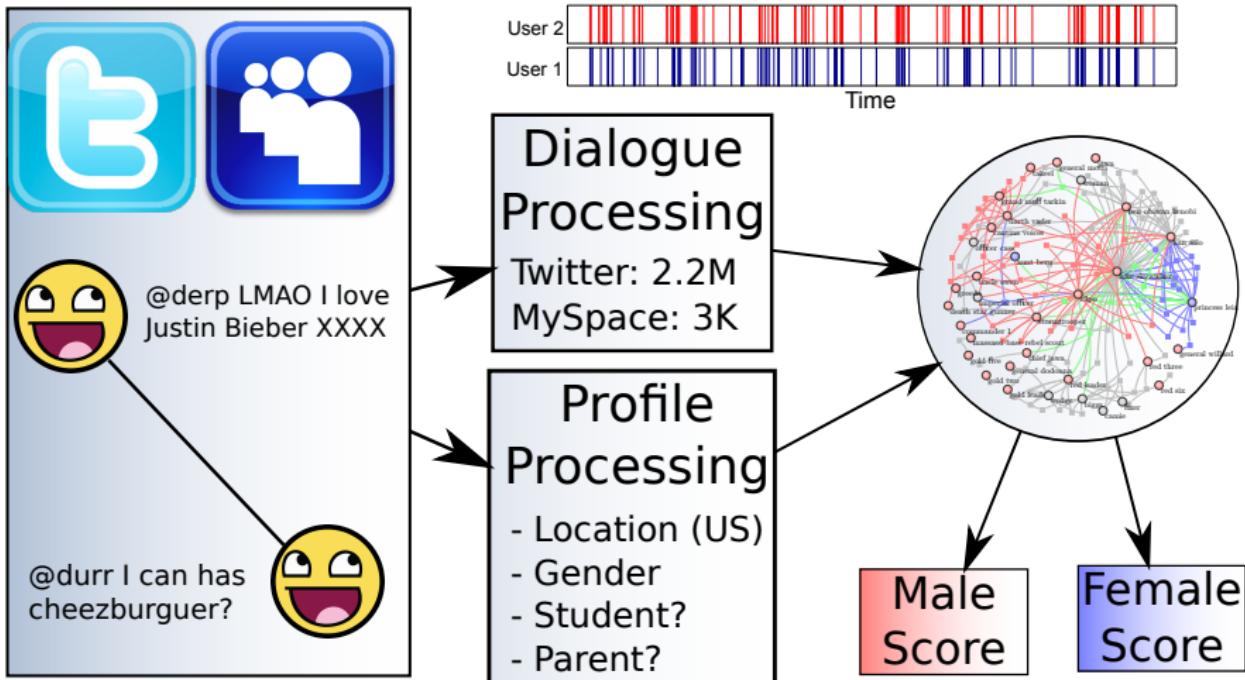

## Dialogue Processing

Twitter: 2.2M  
MySpace: 3K

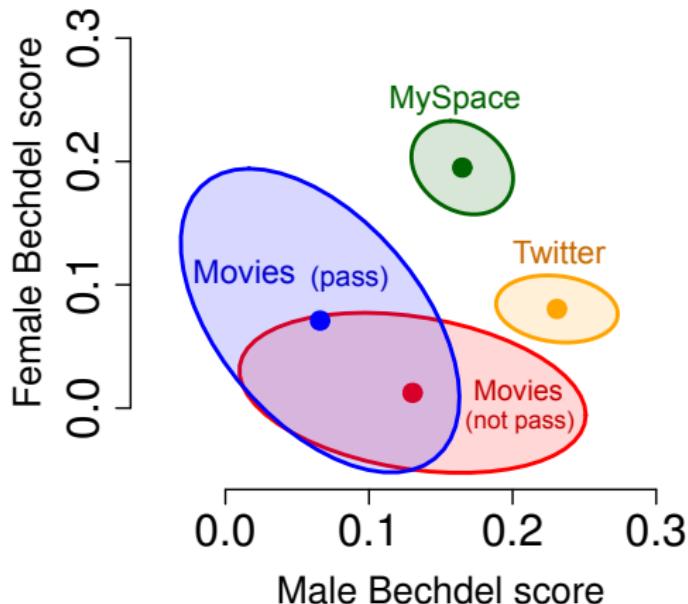

## Profile Processing

- Location (US)
- Gender
- Student?
- Parent?

# Gender in social media dialogues

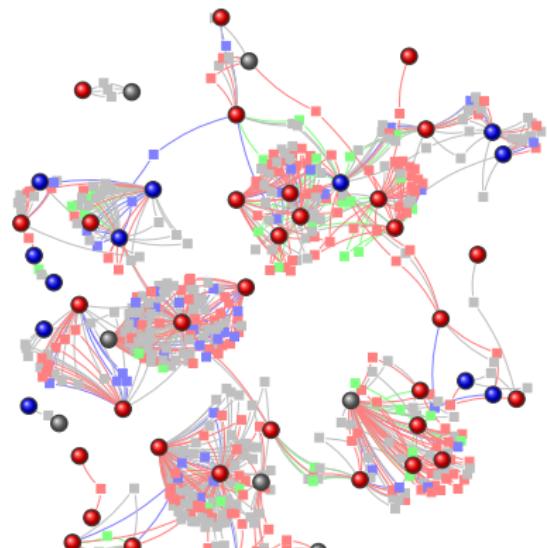

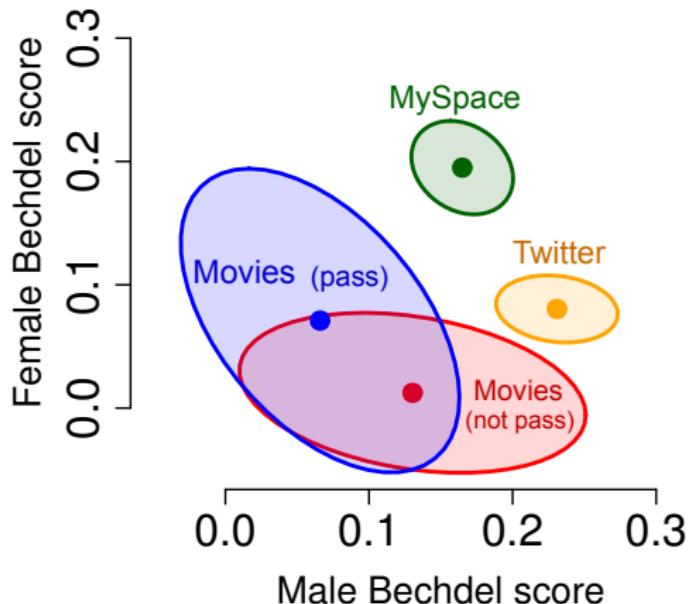

# Gender bias in online interaction

- MySpace shows no asymmetry
- Twitter is closer to movies that do not pass the test

# Gender bias in online interaction

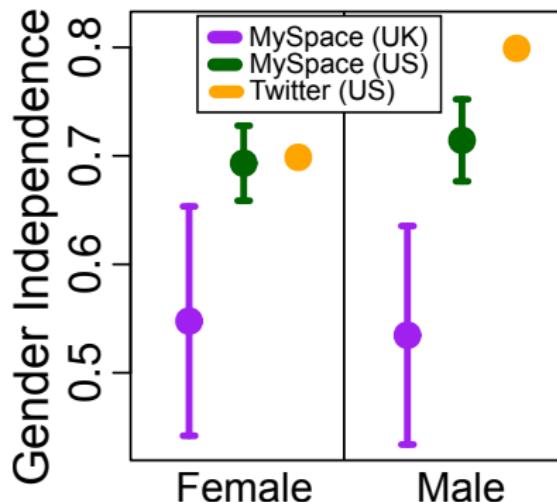

- MySpace shows no asymmetry
- Twitter is closer to movies that do not pass the test
- Interactions between Twitter users from Ann Arbor
- $B_M = 36\%, B_F = 6\%$

# Calculating representative bias

- Ecological validity of Bechdel score?
  - 64% of Twitter users are male
  - ~ 49% male population in US
- Solution: normalization over gender-aligned dialogues

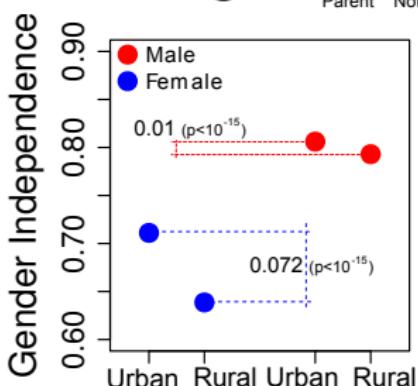

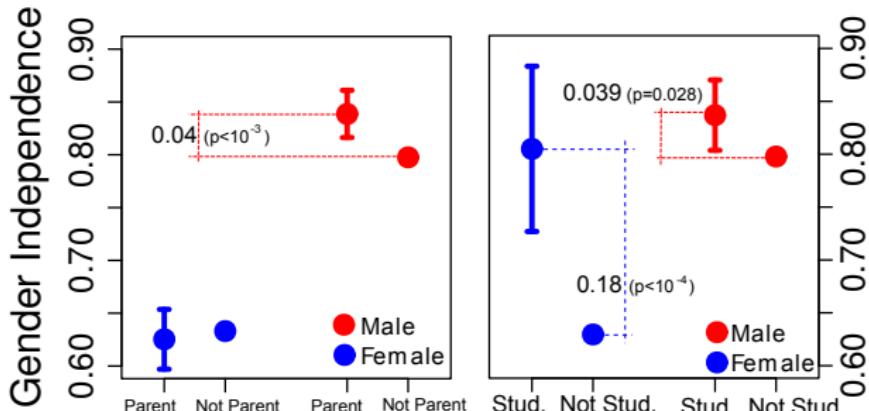

$$I_F = \frac{|D(F, F, 0, *)|}{|D(F, F, *, *)|}$$

$$I_M = \frac{|D(M, M, *, 0)|}{|D(M, M, *, *)|}$$

**Twitter male bias is significant when controlling for unequal gender samples**

# Demographic factors

- Dialogs between fathers tend to mention women less...
- No significant asymmetry for students
- Female independence lower in rural areas

# Geographic and cultural factors

## Disposable male theory

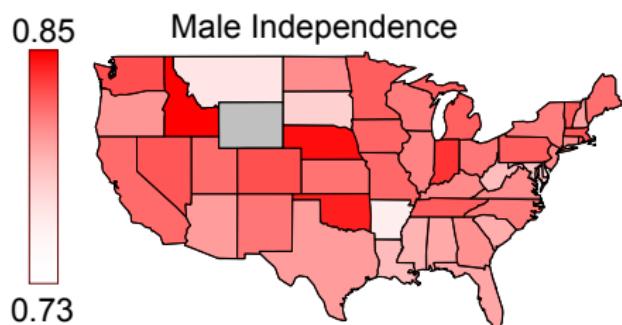

Human cultures evolved into patterns of independent and risk-seeking males as a response to adverse conditions

# Geographic and cultural factors

## Disposable male theory

Human cultures evolved into patterns of independent and risk-seeking males as a response to adverse conditions

- Correlation analysis between state gender independence and latitude  
Controls: long., avg. income, Gini
- Male Independence score in Twitter increases with latitude
- Female Independence score decreases with average income

# Summary

- We designed a computational extension of the Bechdel test
- We integrated data from Twitter, MySpace, YouTube, bechdeltest.com, IMDB, IMSDB
  - We processed 490 movie scripts
  - More than 2M conversations from Twitter and MySpace
- Twitter shows a male bias, but not MySpace
- Demographic and geographic factors in gender asymmetries

# Summary

- We designed a computational extension of the Bechdel test
- We integrated data from Twitter, MySpace, YouTube, bechdeltest.com, IMDB, IMSDB
  - We processed 490 movie scripts
  - More than 2M conversations from Twitter and MySpace
- Twitter shows a male bias, but not MySpace
- Demographic and geographic factors in gender asymmetries

## Conclusion

- The male bias of movie industry is not a fantasy
- Twitter is not the Cyberfeminist utopia

# Thank you!
